

Making Research Work

Solving complex agri-food problems through impactful action research

Imagine...

You are a researcher working hard to design and conduct impactful research projects that solve problems in the community. It can be challenging to motivate stakeholders to engage with your projects. You need to ensure that your research secures funding and that you receive recognition for your work.

Are you a research from a university or research institute? Do you relate to this situation? Then you are very welcome to join the blended learning programme 'Making Research Work'.

Training sessions, field visits, and workshops from iCRA trainers will enable you to:

- Identify your role as a researcher in agricultural innovation and multi-stakeholder processes
- Navigate the complexity and unpredictability inherent to innovation processes
- Motivate actors to commit to and engage with your research
- Formulate and implement demand-driven research that serves the development needs of your community
- Apply research approaches in line with research goals
- Write proposals that attract funding
- Explain complex ideas accessibly
- Negotiate and understand different perspectives

Course Details:

- Short, intensive face-to-face course
- Field visits, networking, workshops and more!
- Scholarships are available!
- Le cours est également disponible en français!

"I don't want my research to just sit on the bench. You want your research to translate. So I came to learn about demand-driven research."
